Problem Statement

Creative stationery enthusiasts need a way to discover and shop from Moonlit Pages Studio through a dedicated website because Etsy's marketplace makes it difficult to present the brand's story and create a more personal customer experience.

2. The Client

Moonlit Pages Studio is imagined as a small creative business run by solo founder named Mia. The studio sells handmade journals, illustrated bookmarks, art prints and stationery sets.

Each product is created in small batches, emphasizing craft, creativity and individuality. At the moment, the studio primarily sells through Etsy. While Etsy provides visibility, it also limits how much personality and storytelling the brand can express. A dedicated website would allow the studio to present its identity more clearly and build a stronger connection with customers.

Client Goals:

- Convert current Etsy buyers into customers on the studio's own website.
- Build an emotional connection with customers through the story behind the brand
- Showcase and sell handmade products in a visually appealing way
- Grow a newsletter mailing list for more direct customer relationships

Success for the site would mean that visitors quickly understand what the studio offers, feels drawn to the look, feel and story, and chooses to either explore products further or sign up for updates.

3. The Users

Primary Users

The primary users are women aged 17 to 30 who identify as creative, book-loving and interested in aesthetics and handmade art. They enjoy journaling, decorating their spaces and collecting

stationery. They often follow art and stationery creators on platforms such as Instagram and Pinterest. They are willing to pay for items that feel personal, artistic and meaningful.

User Needs

- To quickly understand what the brand sells and whether it matches their taste.
- Feel an emotional connection to the brand before committing to a purchase
- To trust that the products are created by a real, genuine creator
- Easily browse and explore products
- Find ways to stay connected with the brand through social media or newsletters
- Discover behind the scenes content that strengthens the relationship with the creator

4. User Tasks

Users may want to:

- Browse products and collections
- Read about the founder and the story behind the studio
- Contact the studio with questions
- Read Frequently Asked Questions about materials, orders and shipping

- Sign up for the newsletter mailing list
- Find links to the studio's social media

Design

The landing page design was first created using Figma Make, guided by a detailed prompt describing the client, target users and the desired tone of the website.

The goal was to create something that feels warm, dreamy and personal matching the atmosphere of the art studio.

Prompt Used:

"Create a landing page for a small independent stationery and journal studio called Moonlit Pages Studio, run by a solo female founder. Target users are creative women aged 17-30 who are into anime aesthetics, journaling, and handmade art. The site should feel warm, dreamy, and personal — like a Studio Ghibli-inspired morning. Include: a hero section with a tagline and two CTAs, a featured products grid, an about preview section, and a newsletter signup. Colour palette: warm cream (#FFF8E7), soft lavender (#C8B6FF), dusty pink (#F4C2C2), amber (#B87840). Typography: Cormorant Garamond (headings), Lora (body), Dancing Script (accents). Tone: gentle, poetic, handmade — not corporate."

Design Justification

Colour Palette

The colours palette was chosen to reflect the soft, dreamy aesthetic of the brand. Lavender works well as a primary accent because it reflects the moonlit theme suggested by the brand name. Amber adds warmth and contrast and warm cream for the background keeps the page calm and comfortable to read without the colours being too overwhelming.

Typography

Cormorant Garamond was chosen for headings because of its literary and artistic feel. It evokes a premium quality that matches the brand's focus on journals and creative art. Lora is used for body text due to its readability. It pairs well with the headings without competing for attention. Dancing script is used sparingly for small decorative accents and labels. Its handwritten feel reflects the handmade products of the brand.

Page Layout and Visual Hierarchy

The layout begins with a hero section that introduces the brand name, tagline, and two clear call-to-action buttons. This helps visitors quickly understand what the studio offers.

Scrolling down reveals a featured products grid so visitors can immediately see examples of the work. A short preview of the "About" section follows, offering a glimpse of the founder's story and encouraging further exploration.

This structure gradually moves the visitor from discovery to curiosity and then toward connection with the brand.

AI Documentation

Tools used

- Figma Make – initial landing page layout and visual direction
- ChatGPT - For refining prompts, explaining code concepts, suggestions
- Claude AI – debugging and concept explanations

What AI Was Used For

Figma Make was used primarily to generate several early layout ideas based on the project prompt. These early concepts helped explore different visual structures and provided a starting point for the design process.

User Testing

Formal user testing was not conducted for this early prototype. However, the design approach was informed by common patterns seen in successful handmade product websites and inspiration gathered from design references.

Final Note

The client scenario used in this project was created specifically for this assignment. The name “Moonlit Pages Studio” was made up and is a fictional design concept.

While researching the project, it became clear that some real businesses also use the name “Moonlit Pages.” This project is not connected to those businesses. The concept, brand story, and website design were developed solely as an educational exercise to explore the design process.
